Tricentis announced that it has entered into a partnership with CloudMonkey Mobile, a leading provider of mobile testing platforms for today's distributed delivery teams. Tricentis will provide integration of its Tosca Testsuite into CloudMonkey Mobile's LabManager, a turnkey solution for managing application effectiveness testing on mobile devices and tablets. The partner solution will allow enterprises to accelerate business innovation through streamlined, automated mobile application testing.

Enterprise customers can leverage the integrated solution to simplify management of the device lab for developing mobile test applications. The solution also enables IT departments to provide a functional, on-premises mobile test lab without compromising internal security by bridging the closed lab network to the enterprise network through a single controlled connection.

The integration of Tricentis Tosca Testsuite with CloudMonkey LabManager provides enterprise customers with a number of advantages. Since it resides behind the safety of the customer's firewall, the on-premises solution ensures the complete physical security of mobile devices; it also provides remote device access for the entire company. Users can run continuous integration (CI) tests automatically from their CI systems and run their automated tests from Tricentis Tosca Testsuite.

"Effective applications are, in essence, the heart of enterprise business today, and mobile deployments are powering more and more transactions daily," said Sandeep Johri, CEO, Tricentis. "By partnering with CloudMonkey Mobile, the world's leading enterprises will be able to ensure both a rapid delivery of functioning applications that support business goals as well as a seamless end-user experience."

"Mobile apps are putting engagement and interaction in millions of hands worldwide every day," said Stu Stern, CEO of CloudMonkey Mobile. "Tricentis and CloudMonkey Mobile create a real synergy for organizations committed to assuring a quality experience across a wide array of consumer devices".
