The rapid growth of cloud-based applications in the enterprise, combined with organizations' desire to integrate applications with mobile technologies, is dramatically increasing application integration complexity. To meet this challenge, Oracle today introduced Oracle SOA Suite 12c, the latest version of the industry's most complete and unified application integration and SOA solution. With simplified cloud, mobile, on-premises, and Internet of Things (IoT) integration capabilities, all within a single platform, Oracle SOA Suite 12c helps organizations speed time to integration, improve productivity, and lower TCO.

Oracle SOA Suite 12c enables organizations to easily integrate and connect applications across their entire IT ecosystem on a single, unified platform, helping them achieve faster time to market and increased productivity with a low TCO.

Oracle SOA Suite 12c simplifies cloud integration with ongoing additions to Oracle Cloud Adapters, which help organizations integrate well-known SaaS applications including Oracle Sales Cloud, Oracle Marketing Cloud, Oracle Service Cloud, Salesforce.com, and many others. This adapter framework uses the same intuitive adapter methodology customers are familiar with for on-premises integration.

Oracle SOA Suite 12c includes new features to help increase developer productivity, including a single-click installer, new debugging and testing capabilities, and extensive templating that can be used to share best practices as well as accelerate the development or maintenance of projects.

Oracle SOA Suite 12c Is a Game Changer. The runtime and footprint of the product have been optimized at every level (memory, disk, database) to support mission critical enterprise-wide deployments and web-scale performance, further enabling customers to process increasingly massive workloads.

In addition, the new release provides rapid and advanced mobile integration with improved support for lightweight REST and JSON integration standards. API management, which exposes enterprise applications as REST and JSON, is now simplified as a result of native support for these standards within Oracle SOA Suite 12c.
